RECOVERY UNIT THE BIN SHELTER Shelter for rolling bin

This modular unit is intended for outdoor use in busy public areas. It allows for source sorting of residual materials in public spaces while limiting cross-contamination. The BIN SHELTER can accommodate a wheeled bin of 240L or 360L concealed behind a door equipped with a lock. It is user-friendly for the public with its easy-to-use opening and display, as well as maintenance personnel, as the materials are already inside the wheeled bin.

Constructed in aluminum, this unit offers a superior product quality. It is lighter yet durable, with resistance to oxidation (rust). Its manufacturing includes at least 50 % recycled content and delays the spread of fire. The side surfaces are complemented by recycled plastic slats.

The unit is equipped with signage around the opening in accordance with the Quebec standard signage. This product requires assembly to optimize transportation. Distributed across two elongated pallets, we can include up to 8 units !

Do not worry, the bin shelter has been designed to be easy to assemble. Everything is clearly explained in our included assembly guide.
